Note:
Adjusted the load capacitance according to the crystal specification

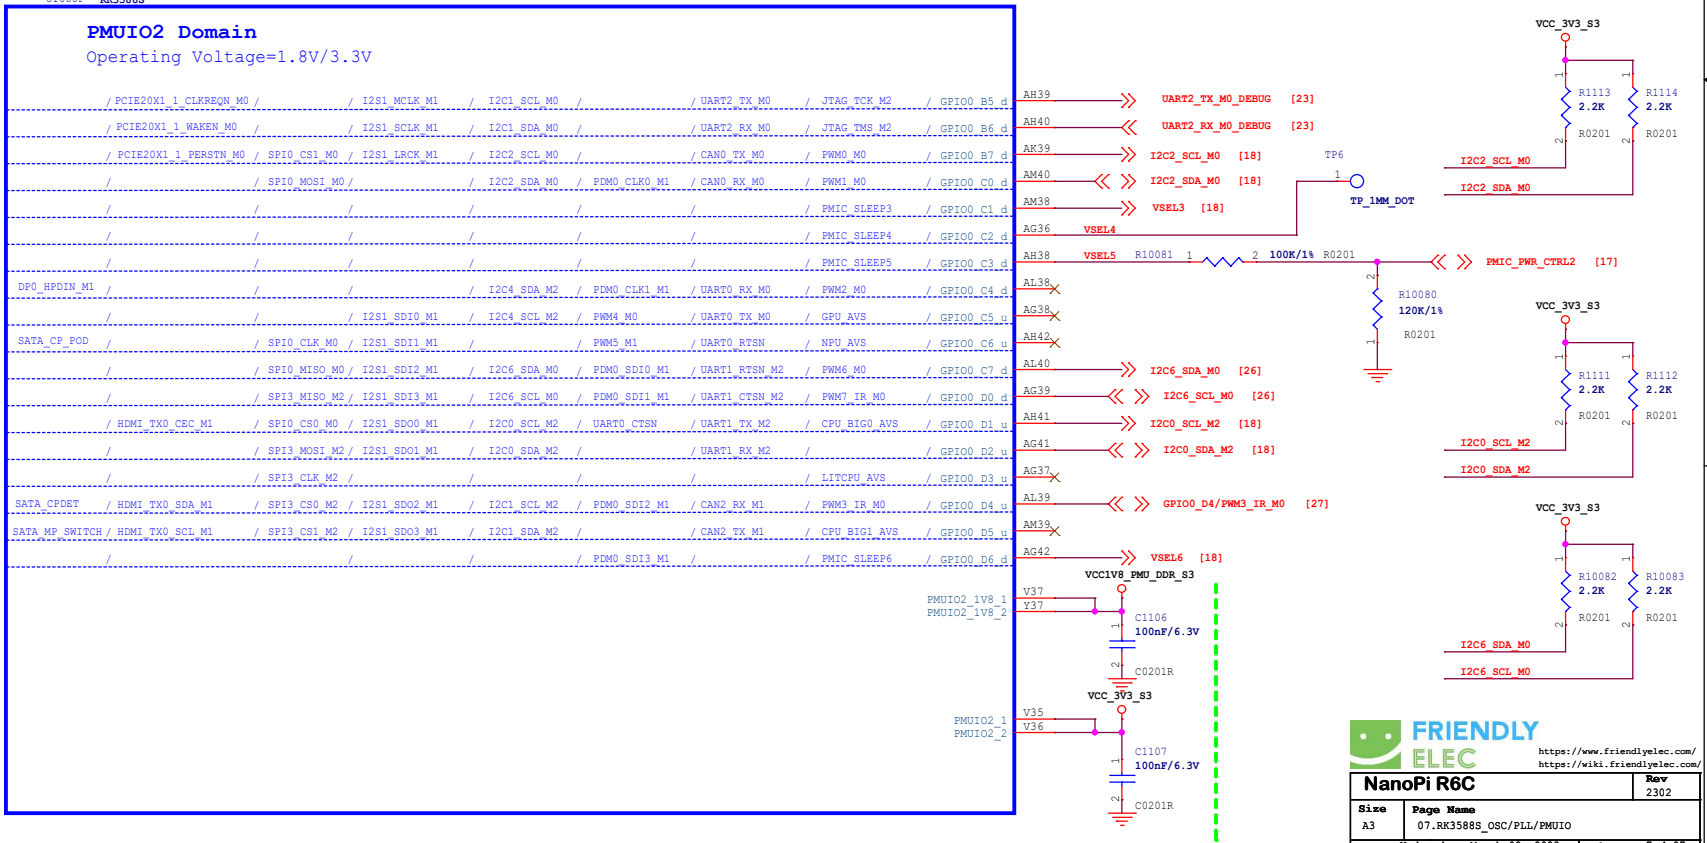

The CL is the load capacitance of the crystal that is recommended by the crystal vendors to obtain target clock frequency.

$CL = \{CL1 * CL2 / (CL1 + CL2)\} + PCB \text{ strays}$
Total CL <= 12pF

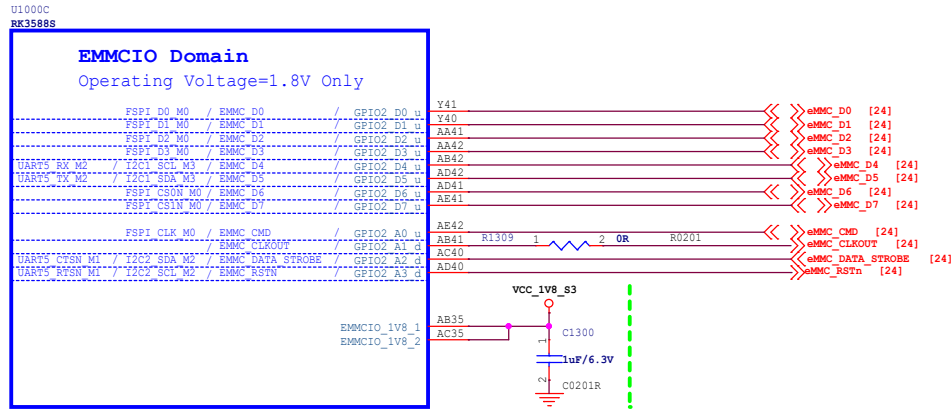

Note:
The Caps between green line and U1000 should be placed under the U1000 package. Other caps should be placed close to the U1000 package
